

Electrified Partnership

- Service company Global Automotive Service GmbH (G.A.S.) enters into a cooperation with Sevic Systems SE
- G.A.S. is the official and manufacturer authorized service partner for all workshop services
- Sevic plans to sell 3,000 vehicles in Germany in 2022
- The partnership starts in January 2022

Alexander Brilis
General Manager Sevic

Andreas Brodhage
CEO G.A.S.

Dorsten/Bochum, December 2021. G.A.S.'s impressive customer portfolio is growing. Especially the provision of a qualified, certified, and proven mobility service network also convinced the vehicle manufacturer Sevic, headquartered in Bochum. Sevic offers innovative logistics solutions. The Sevic V500e is manufactured in the European Union and is predestined for urban use or in industrial plants and various other areas. "With increasing urbanization and ever stricter environmental regulations, last-mile logistics is becoming more complex and important. With the ban on internal combustion vehicles from 2030 at the latest, the situation in the last mile will create further opportunities for our smart vehicles," says Alexander Brilis, General Manager at Sevic Systems.

G.A.S. provides today the only multi-brand workshop network in Europe specializing in mobility service, offering lean processes and high service quality.

Services such as inspections, maintenance and repairs are carried out via the G.A.S. network. Claims management is offered through G.A.S. subsidiary G.A.R. (Global Automotive Repair). Sevic utilizes a dense and sustainable service network in Germany, which consists of independent facilities.

User-friendly. Fully electric. Durable.

"Our acceptance in the fleet market confirms our strategic orientation towards the electric network," Andreas Brodhage, managing partner of G.A.S., is pleased to say. "I'm equally pleased with this development for our partner companies, who deliver results day in and day out and make these partnerships with vehicle manufacturers possible in the first place."

As one of the major pioneers in the fleet management market and specializing in independent full services for commercial and electrified fleets, G.A.S. can offer its partners real customer advantages. "We can offer vehicle manufacturers a complete infrastructure for after-sales service. We enable fast mobility, transparent processes, our in-house warehousing and parts procurement, and highly capable workshop partners."

Adaptable. Flexible. Cost-efficient.

The V500e uses an intelligent vehicle architecture with interchangeable cargo options. Cargo boxes for last-mile delivery, special boxes for postal services, flatbeds for municipalities and many more individual solutions are available. Users can change cargo options in just 60 seconds. All that is needed is a forklift.

"We are pleased about the confidence in the performance of the free market in Germany," Andreas Brodhage sums up. The agreement concluded provides for service (inspections, maintenance, repairs) on the electric vehicles. Sevic expects to sell 6,000 V500e vehicles in Europe in 2022.
